Software Requirements Specification

1. Introduction

Introduction an overall picture of the system using collaboration class diagram

2. Use Cases

The types of users are Super User, Client, Developer and Visitor.

A brief summery of the users are:

- **Super User:** Controls and handles various changes and exception.
- **Client:** Posts requirements and pays developer
- **Developer:** Works on client's requirement when chosen
- **Visitor:** Non-registered (or temporarily registered) user with limited access to view statistics and public information

2.1 Create an Account

The user-type Visitor will be able to create an account by entering their userid, name, deposit amount(\$), email, password. Users that want to apply to be a client can select the user-type Client. Users that want to apply to be a developer can select the user-type developer. Users that want to apply to be a super-user can select the user-type super-user and enter the super-user key. Client and developer usertypes can add their deposit amount. Once the user enters submit, the user's user id and email will be validated by the system to check the uniqueness of the user id and email. If the user id or email address of the user is not unique, the system will send an exception message to the user stating the error. The user can then re-enter a new user id or email. The user will have to enter the password and the password-confirmation while creating an account. If the password and password-confirmation does not match, the system will send an exception message to the user stating the error. The user can then re-enter these two fields.

Precondition: User is connected to the internet

Normal Scenarios:

1. User enters their userID, name, email, password, password confirmation and desired usertype.
2. User's email and userID validation for uniqueness
3. User's password and password confirmation for match
4. User is redirected to the welcome GUI interface

Exception Scenarios:

1. User does not enter a required field
 - Display error message to user to enter all the required fields/information
2. User's email and userID already exists in the database
 - Display error message stating email or userID is not unique
3. User's password and password confirmation does not match
 - Display error message to user stating the password does not match the confirmatio

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

2.2 Sign-in

The user can Sign-in by entering their email and password. If the user's email exists in the system, the system will verify the password. If not the system will ask the user to re-enter the email or create a new account. The user will be able to use the turk-system if the password is valid. If the password is not valid the user will be asked to re-enter their password.

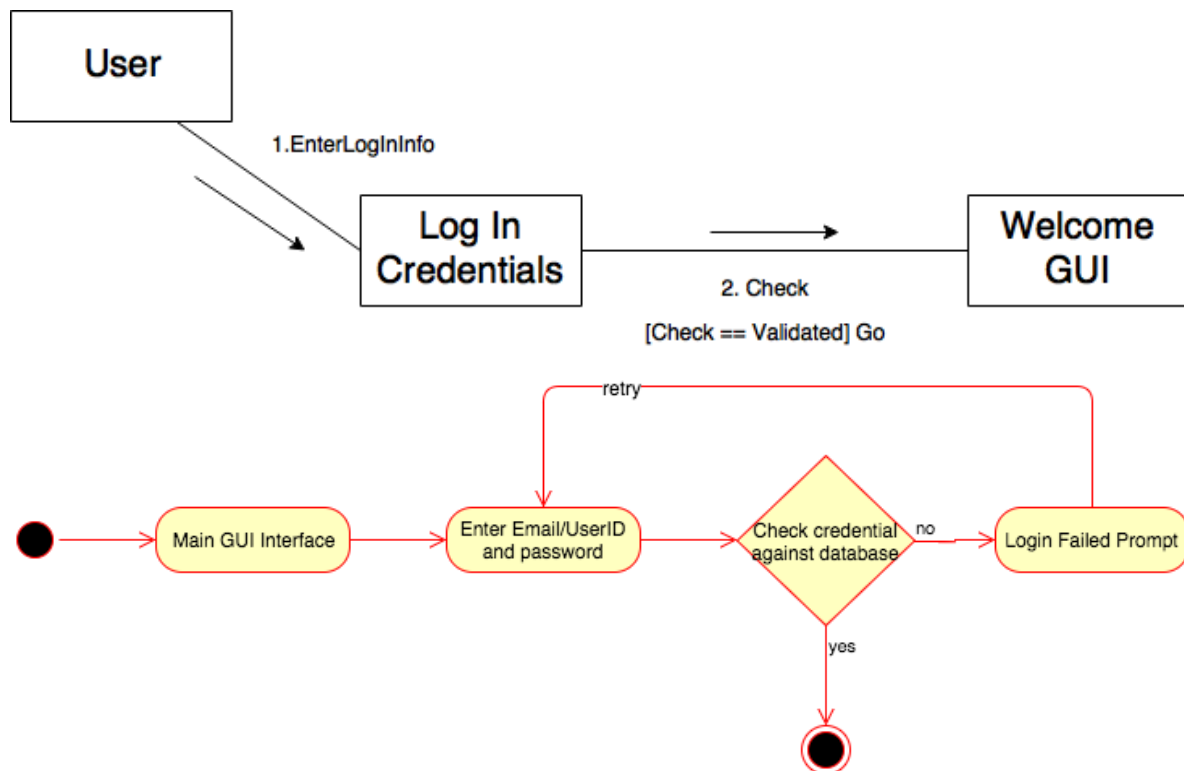

Precondition: User is connected to the internet

Normal Scenarios:

1. User enters their email and password
2. User's email address is validated against the database for match
3. User's password is validated against the database for match
4. User is redirected to the welcome GUI interface

Exception Scenarios:

1. User does not enter a required field
 - Display error message to user to enter all the required fields/information
2. User's email address does not match
 - Display error message to user stating email is not found
3. User's password does not match
 - Display error message to user stating password is does not match

2.3 Search Public Information

Precondition: User is connected to the internet User is logged in the system

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

Normal Scenarios:

1. User visits the welcome GUI interface
2. User types the search query in the search box and searches
3. User's search query is validated
4. System displays the matched result of the search query of links to Users or projects
5. User follows desired links to view project/user histories and credentials
6. User is redirected to the respective link's GUI interface

Exception Scenarios:

2. User does not enter any information on the search query
 - Display error message to user to enter all the required fields/information
3. No result matched with the database
 - Display error message stating no result found
 - Prompt user to re-enter the search query

2.4 Add Profile Details

Precondition: User is connected to the internet User is logged in the system

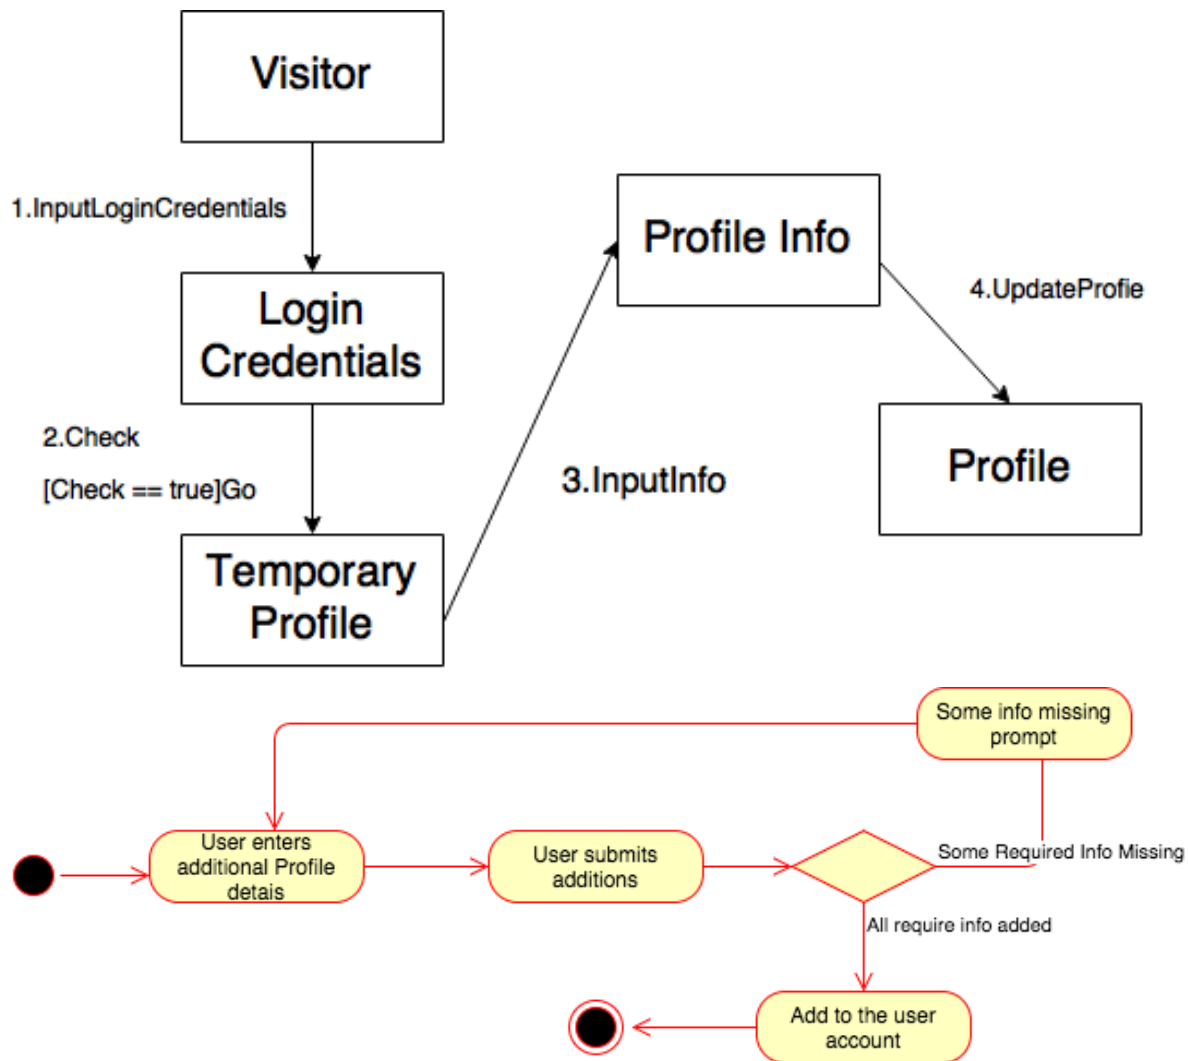

Normal Scenarios:

1. User views the welcome GUI interface and visits the profile
2. User selects the Add more information
3. User enters information about her/himself including resume, picture, interests
4. Usertype - Developers add sample work
5. Usertype - Clients add business credentials

Exception Scenarios:

3. User does not enter a required information
 - Prompt error message to user asking for the required information
4. Usertype - Developers does not enter any sample work
 - Prompt error message to user asking for the required information
5. Usertype - Client does not enter any business credentials
 - Prompt error message to user asking for the required information

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

2.5 View Application Status

Precondition: User is connected to the internet User is logged in the system

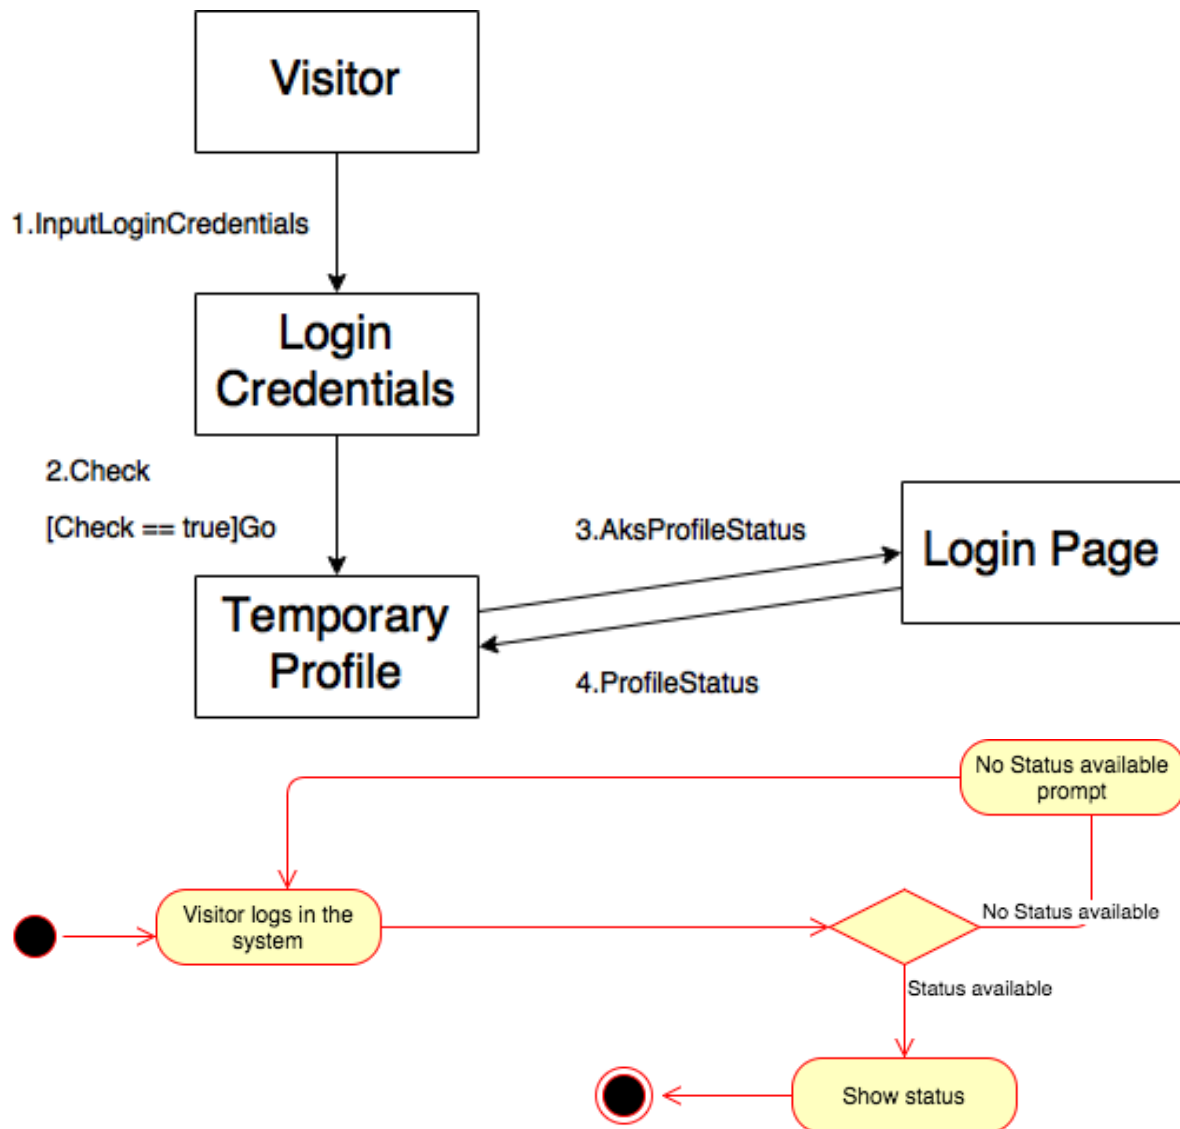

Normal Scenarios:

1. Usertype - Visitor views the main GUI interface
2. User views the application status on the main page
3. Add more details feature is disabled or enabled based on the application status

Exception Scenarios:

2. No status available for that user
 - Prompt error message to user stating there is no status information available

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

2.6 Hire a Biding Developer

Precondition: User is connected to the internet User is logged in the system Usertype is client

Normal Scenarios:

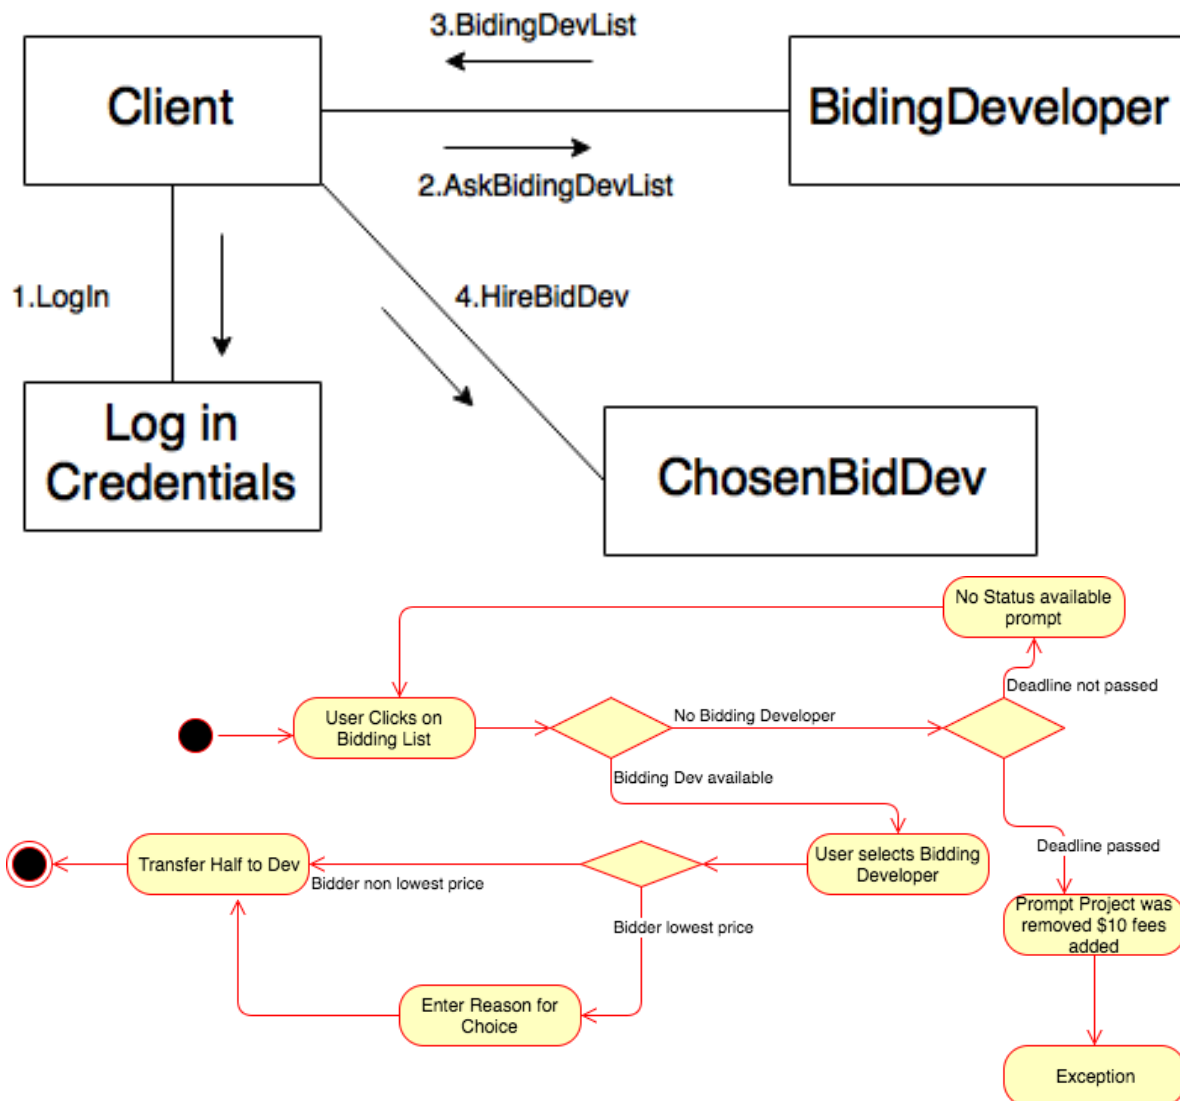

1. Usertype - Client visits the main GUI interface
2. Client selects view bidding developers option
3. Redirect client to the list of all bidding developers for the system demand
4. Client clicks on the bidding developer to hire
5. Confirmation is sent and verified in the system
6. Half of the bidding price is transferred from the client to the winner developer

Exception Scenarios:

3. No bidding developers were found in the system

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

- a. The posted deadline has passed
 - Redirect client to the project removed and \$10 fees charged information page
- b. The posted deadline has not passed
 - Prompt client with message that no bids placed for this system
4. Client clicked on the bidding developer of non-lowest price
 - a. Prompt a justification text-field for client requesting the reason
5. Client does not have enough amount in their account
 - a. Send warning message to the client and prompt them to add money

2.7 Add Money to the Total Deposit

Precondition: User is connected to the internet User is logged in the system Usertype is client

Normal Scenarios:

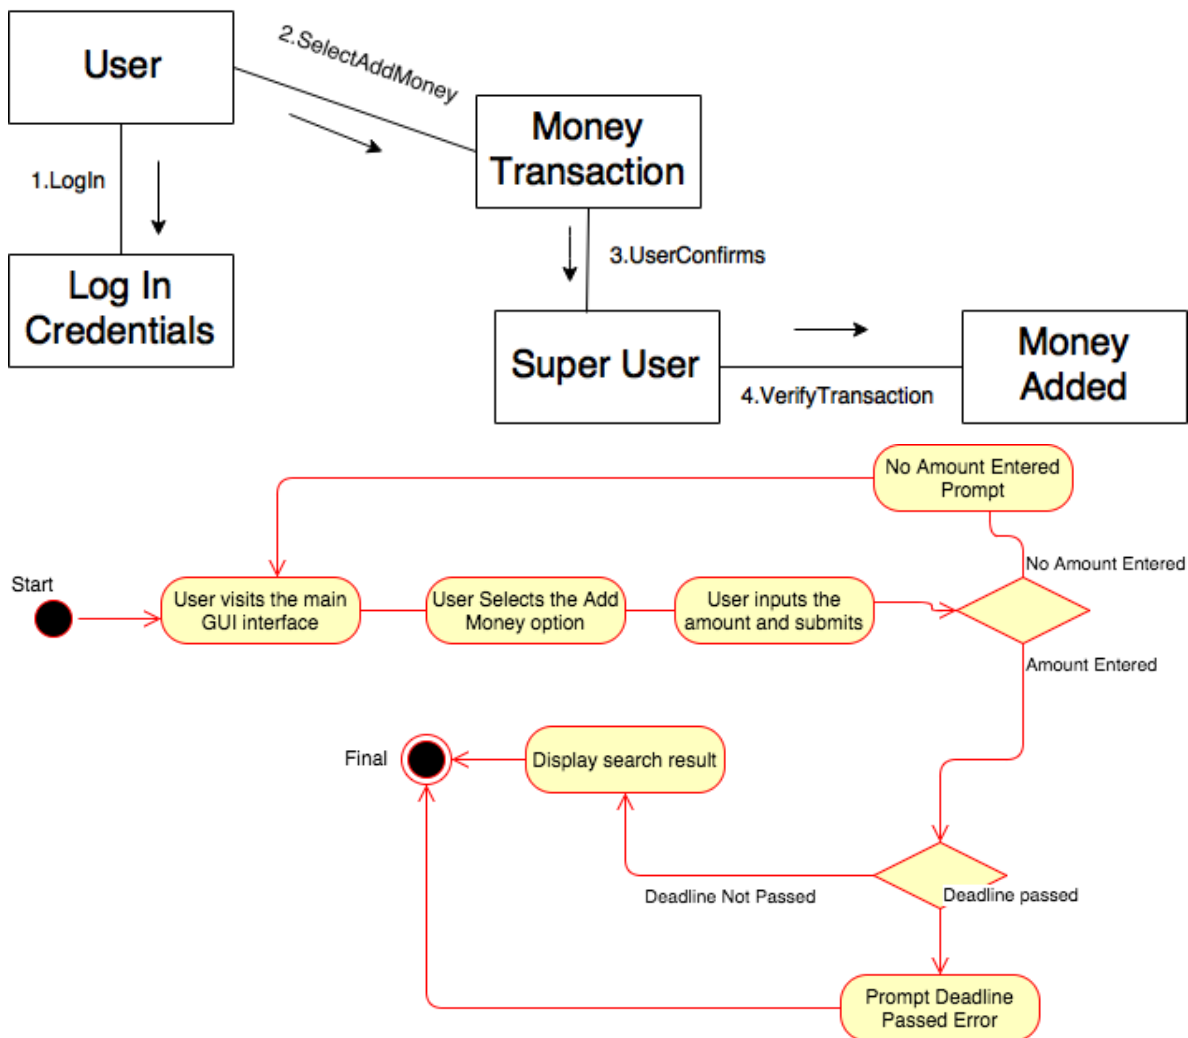

1. Usertype - Client visits the main GUI interface

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

2. Client selects Add money to total deposit option
3. Redirect client form with amount field
4. Client clicks the confirm option
5. Confirmation is sent and verified in the system

Exception Scenarios:

3. Client did not enter any amount
 - Prompt error message to user asking for the required information
4. Deadline for adding deposit has already passed
 - Prompt user that the deadline has already passed
 - Redirect client fees charged information page

2.8 Post System Demand

Precondition: User is connected to the internet User is logged in the system Usertype is client

Normal Scenarios:

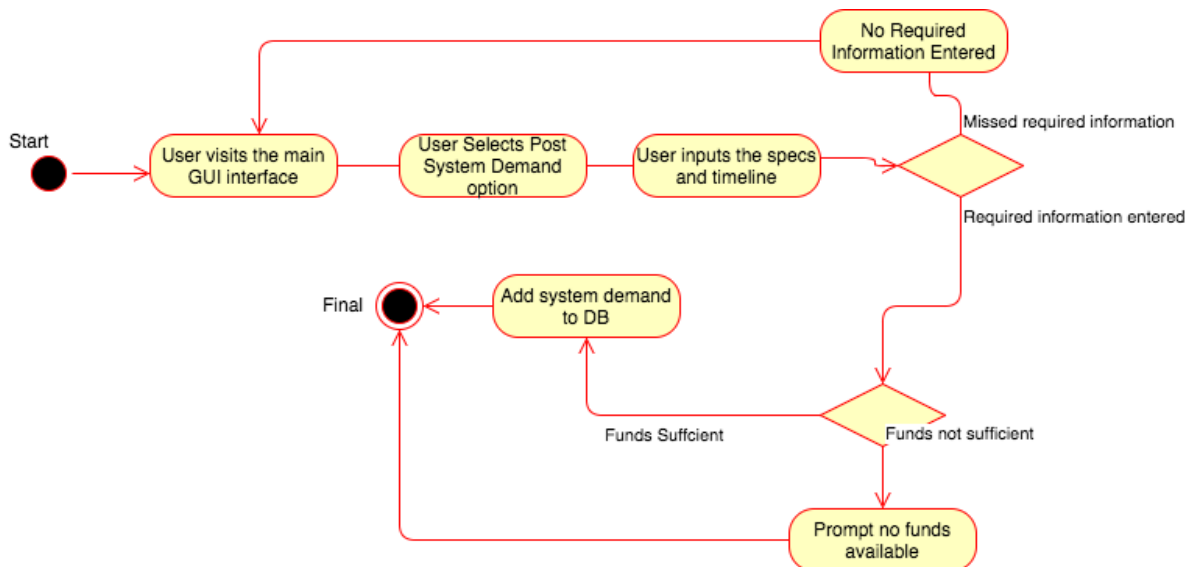

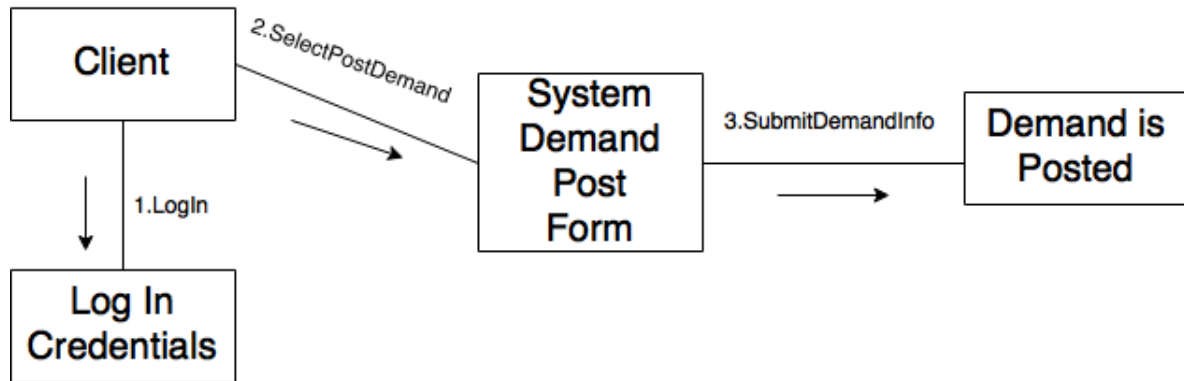

1. Usertype - Client visits the main GUI interface

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

2. Client selects post a system demand option
3. Client enters information including a paragraph describing system spec.
4. Client enters information for bidding timeline
5. Client submits the system demand

Exception Scenarios:

5. Client did not enter required information
 - Prompt error message to user asking for the required information

2.9 Quit From the System

Precondition: User is connected to the internet User is logged in the system

Normal Scenarios:

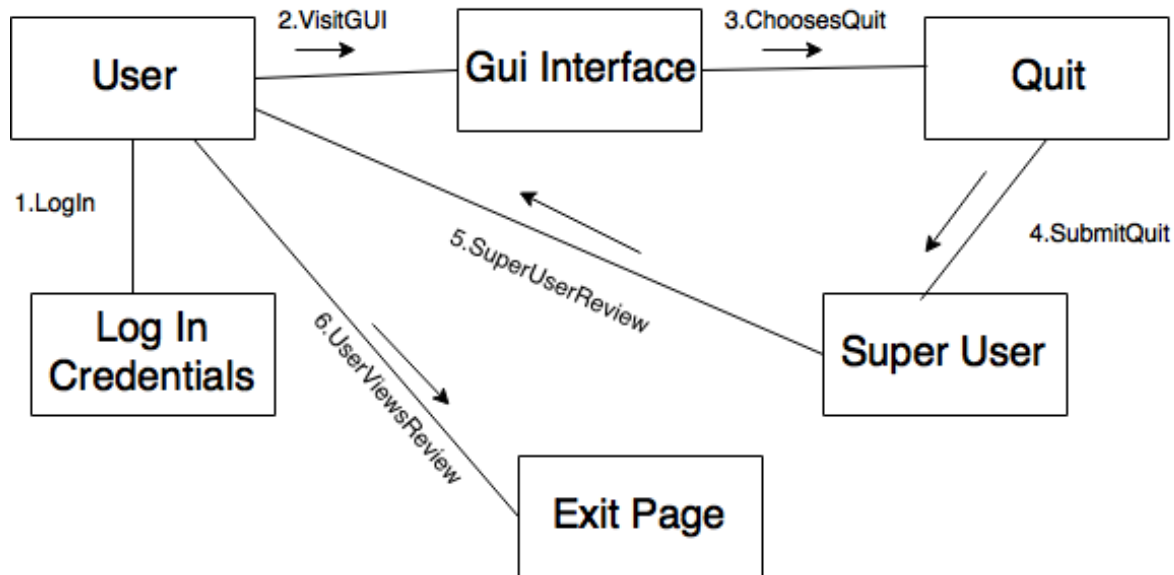

1. User visits the main GUI interface
2. User selects Quit from System option
3. User enters option information for reson-to-quit text-field
4. User enters submit button
5. System sends user information for final review from the super-user
6. User views final review from the super-user

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

7. User is redirected to the exit page

Exception Scenarios:

6. User has unpaid/unfinished system demand
 - Prompt user the reason for why they can not quit the system yet

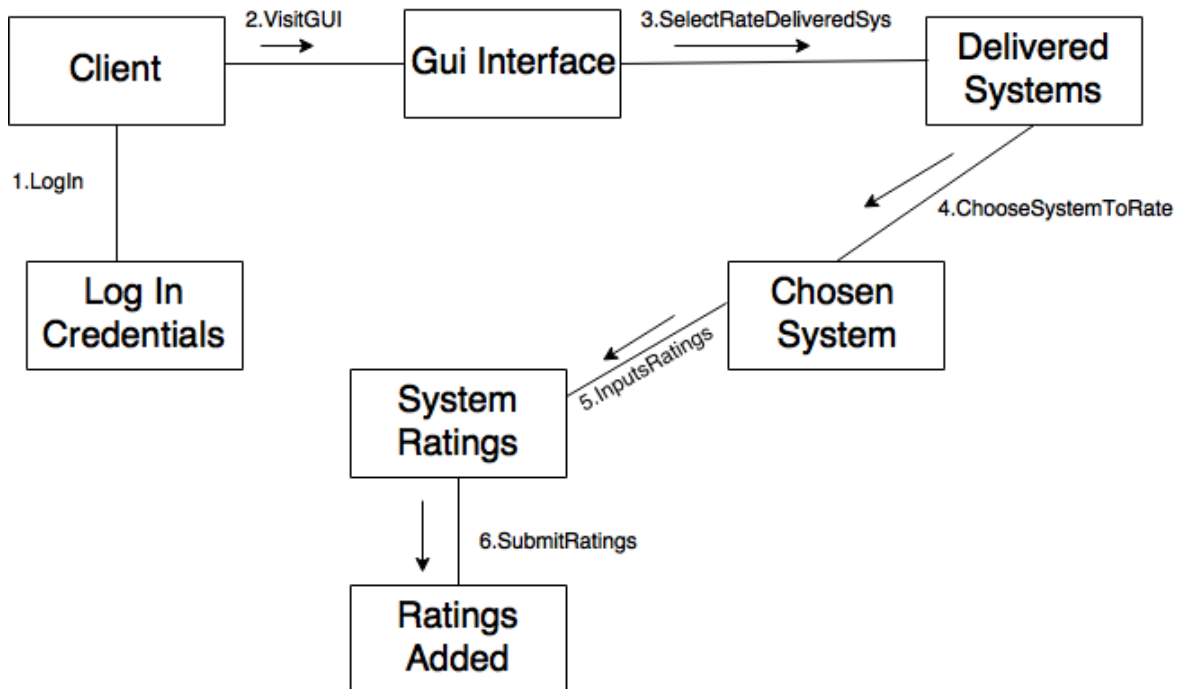

2.10 Client Rate Delivered System

Precondition: User is connected to the internet User is logged in the system Usertype is client The required system is delivered to the client

Normal Scenarios:

1. Client visits the main GUI interface
2. Client selects the Rate delivered system option
3. Client is redirected to the page with all the delivered system for that client
4. Client clicks on the system that they want to rate
5. Client enters the desired rating for the system
6. Client submits the rating for the system
7. Rating verified by the system

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

Exception Scenarios:

7.
 - a. Rating is higher than 3
 - Transfer the remaining bid money held by the super-user to the corresponding developer
 - b. Rating is lower than 2
 - Prompt the user with the note text-field about the reason of the low feedback

2.11 Bid on Any Demand With Promised Timeline and Money

Precondition: User is connected to the internet User is logged in the system Usertype is developer

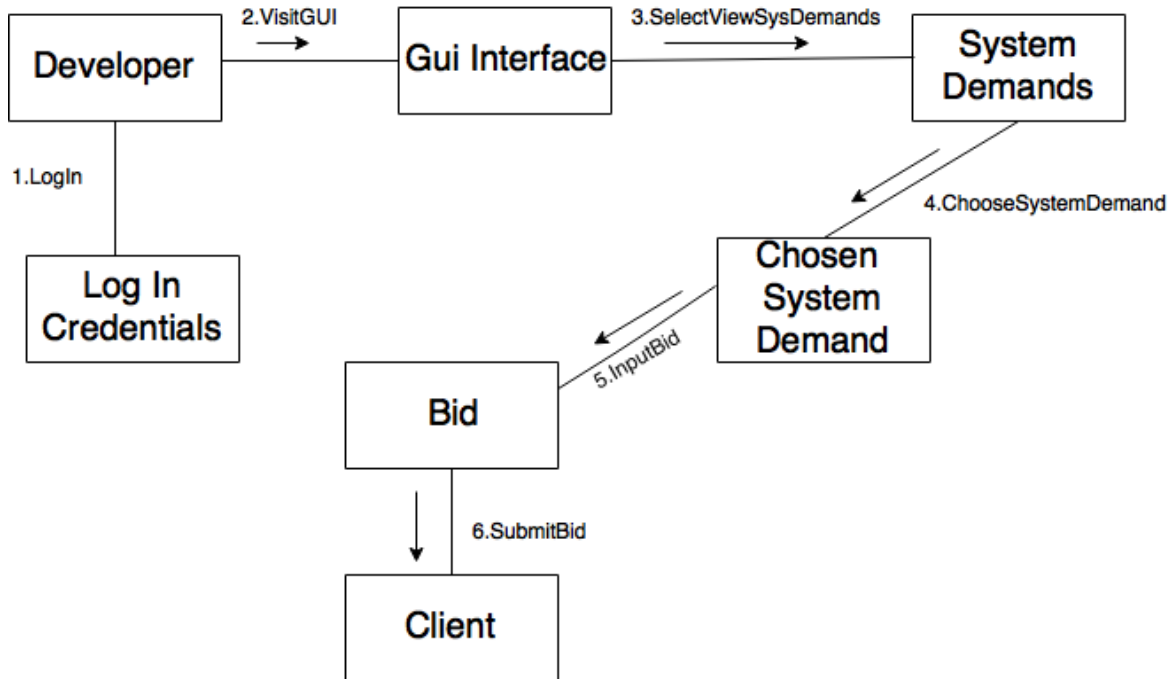

Normal Scenarios:

1. Developer visits the main GUI interface
2. Developer selects the View System Demands option
3. Developer is redirected to the page with all the current system demands
4. Developer clicks on the system demands that they want to bid on
5. Developer enters all the required fields for the bid
6. Developer submits the bid to the client
7. Submission is verified by the system

Exception Scenarios:

3.
 - a. No system demands available in the turk-system
 - Prompt user that there is no system demands posted
4.
 - a. Developer did not enter required information for the bid
 - Prompt user asking for the required information for the bid

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

2.12 Submit Delivered System

Precondition: User is connected to the internet User is logged in the system Usertype is developer

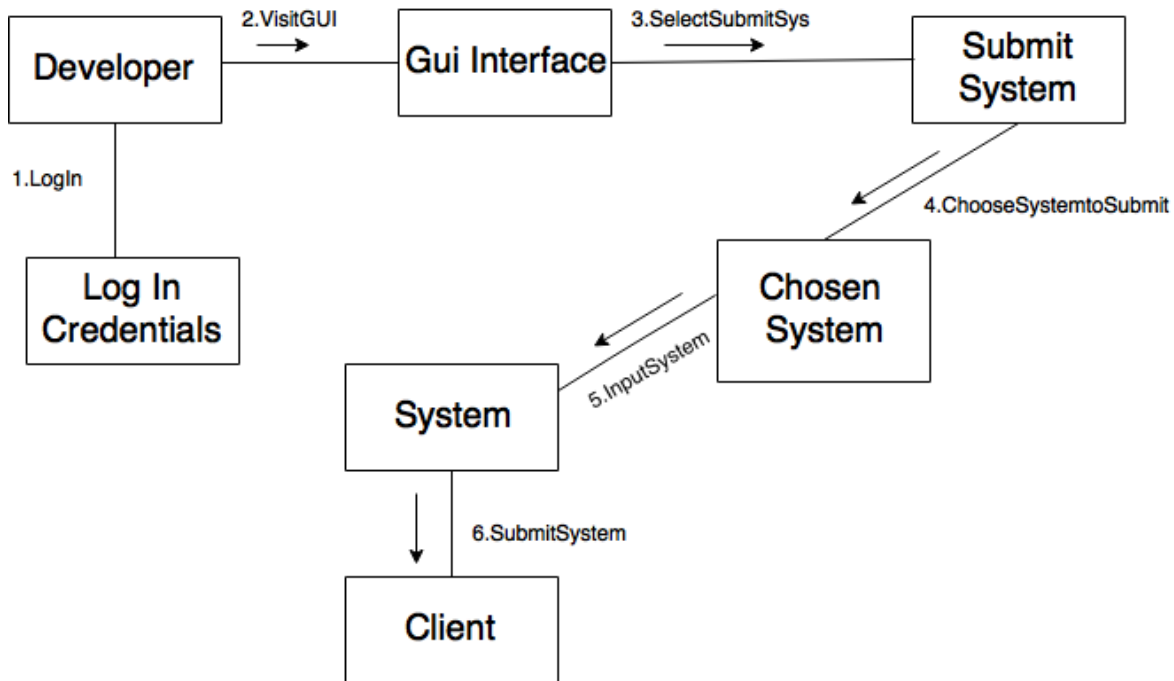

Normal Scenarios:

1. Developer visits the main GUI interface
2. Developer selects the Submit system option
3. Developer is redirected to the page with all the systems for that developer
4. Developer clicks on the system that they want to submit
5. Developer enters all the required fields for the system delivery
6. Developer submits system to the client
7. Submission is verified by the system

Exception Scenarios:

7. a. Developer submitted the system before or on the deadline
 - Transfer the remaining half of the system bid amount to the super-user account
- b. Developer submitted the system after the deadline
 - Transfer the front bid amount and fixed penalty from the developer to the client
 - Rate developer with 1 rating

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

2.13 Rate Client

Precondition: User is connected to the internet User is logged in the system Usertype is developer

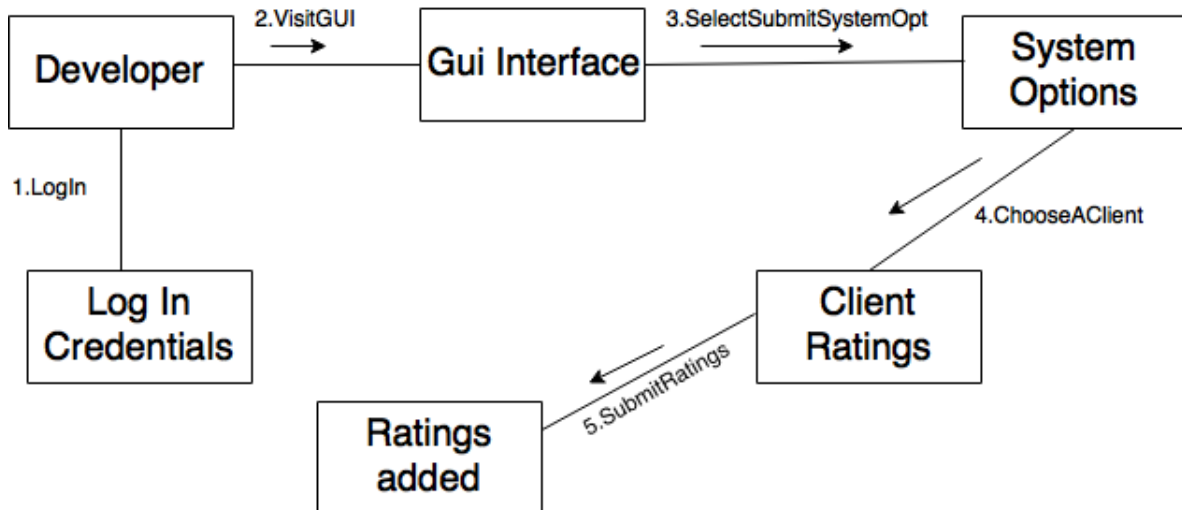

Normal Scenarios:

1. Developer visits the main GUI interface
2. Developer selects the Submit system option
3. Developer is redirected to the page with all the systems for that developer
4. Developer clicks on the client that they want to rate
5. Developer enters the rating for client
6. Developer submits the rating
7. Submission is verified by the system

Exception Scenarios:

5. Developer entered rating lower than 2
 - Prompt user to enter a paragraph for the low rawting

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

2.14 Send Protesting Message to the Super-User

Precondition: User is connected to the internet User is logged in the system Usertype is developer or client

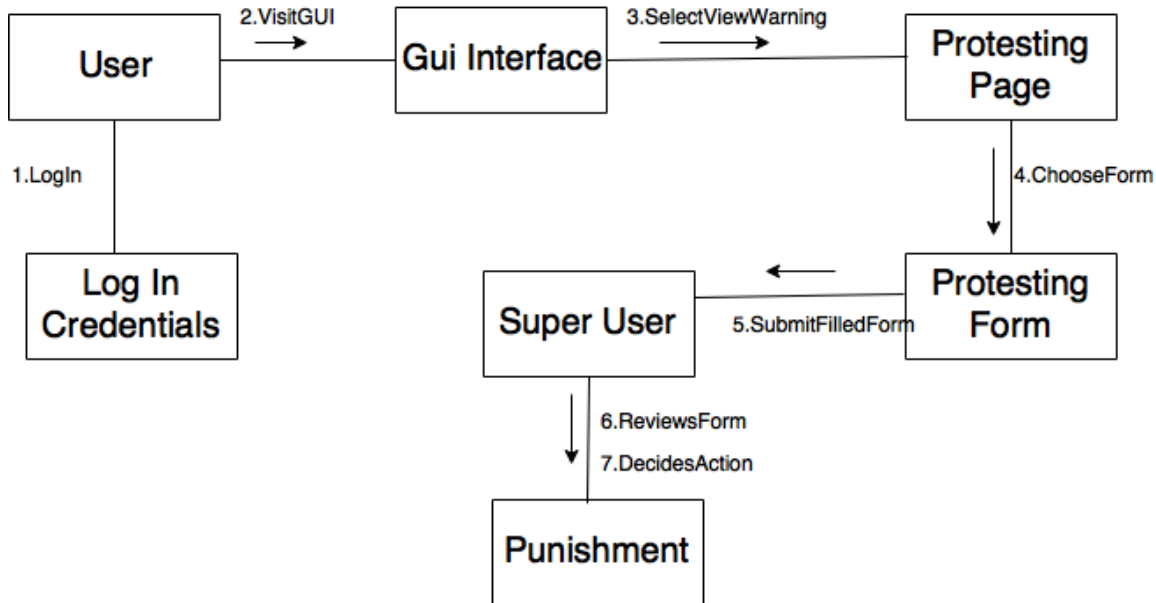

Normal Scenarios:

1. User visits the main GUI interface
2. User selects the View warning and deadline option
3. User is redirected to the page with a form to submit protesting request
4. User enters the required information in the form
5. User submits protest message
6. Submission is verified by the system

Exception Scenarios:

4. User did not enter all required information in the protest form
 - Prompt user to enter the required information

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

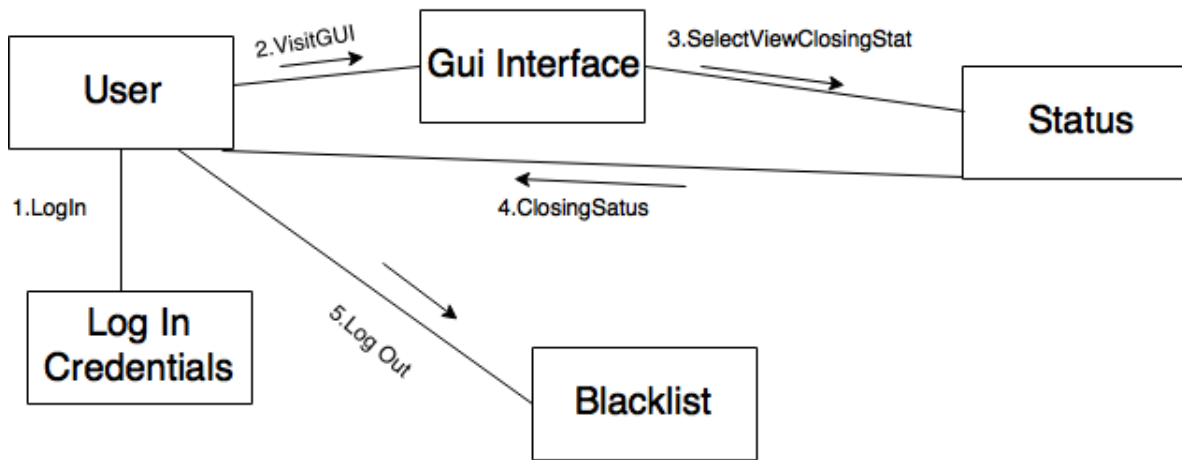

2.15 View Account Closing Status Information

Precondition: User is connected to the internet Usertype is developer or client User is thrown out of the system

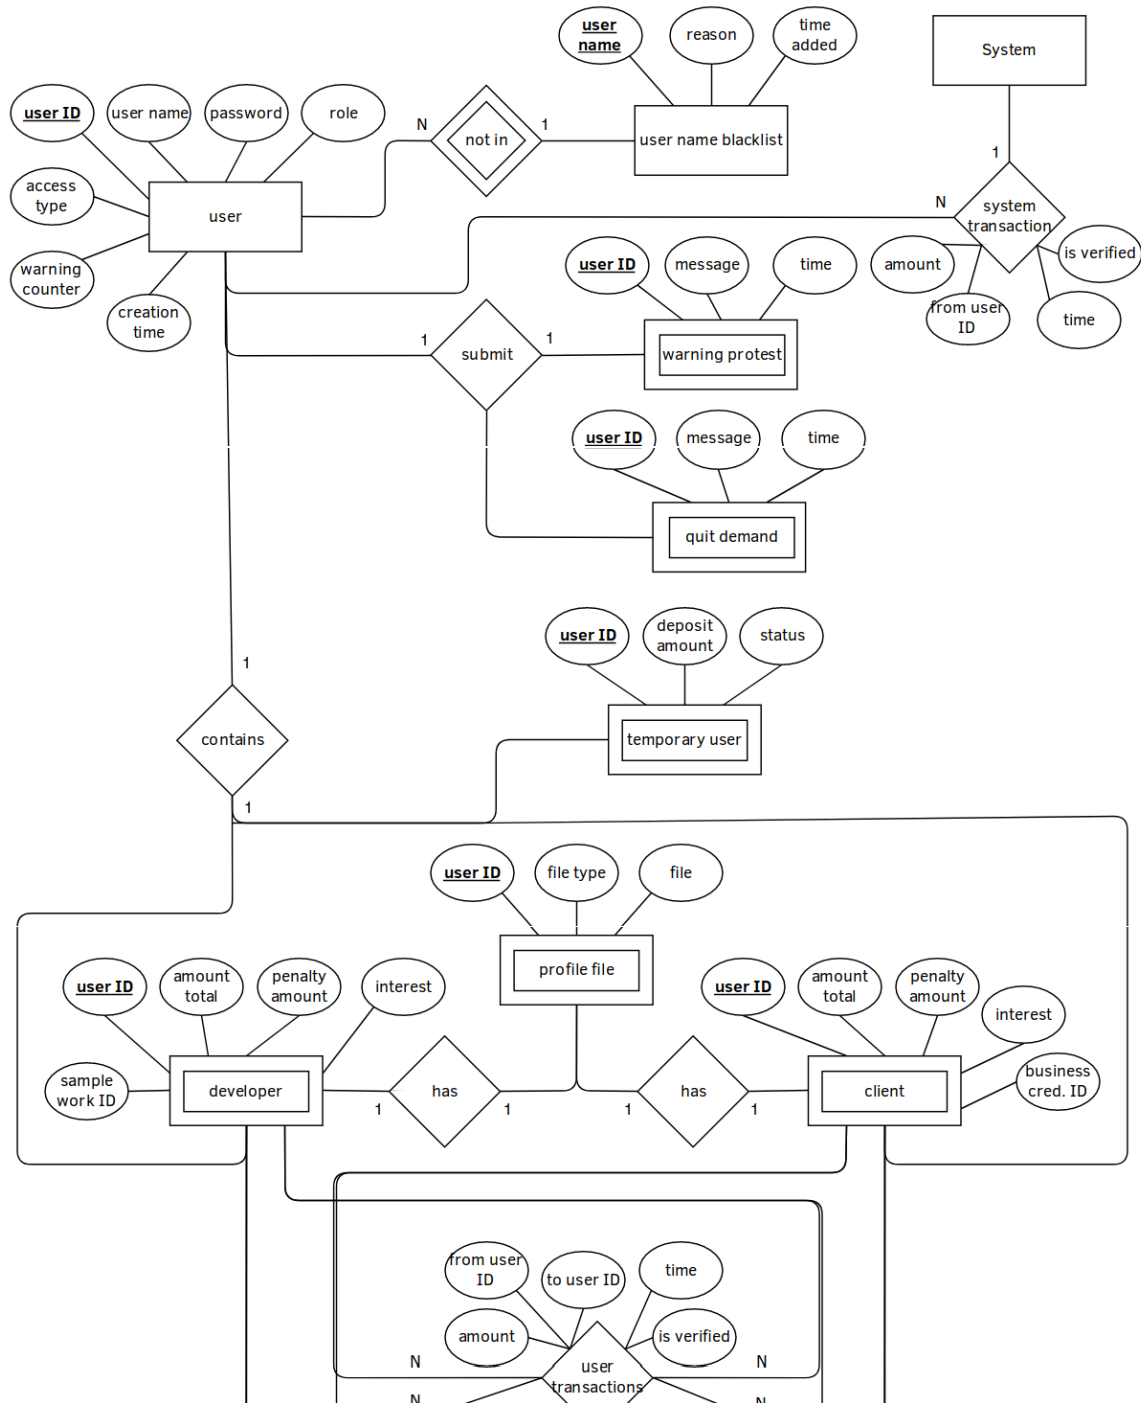

Normal Scenarios:

1. User logs into the system
2. User visits the main GUI interface
3. User views the Closing status information
4. User logs out
5. System adds user to the black-list

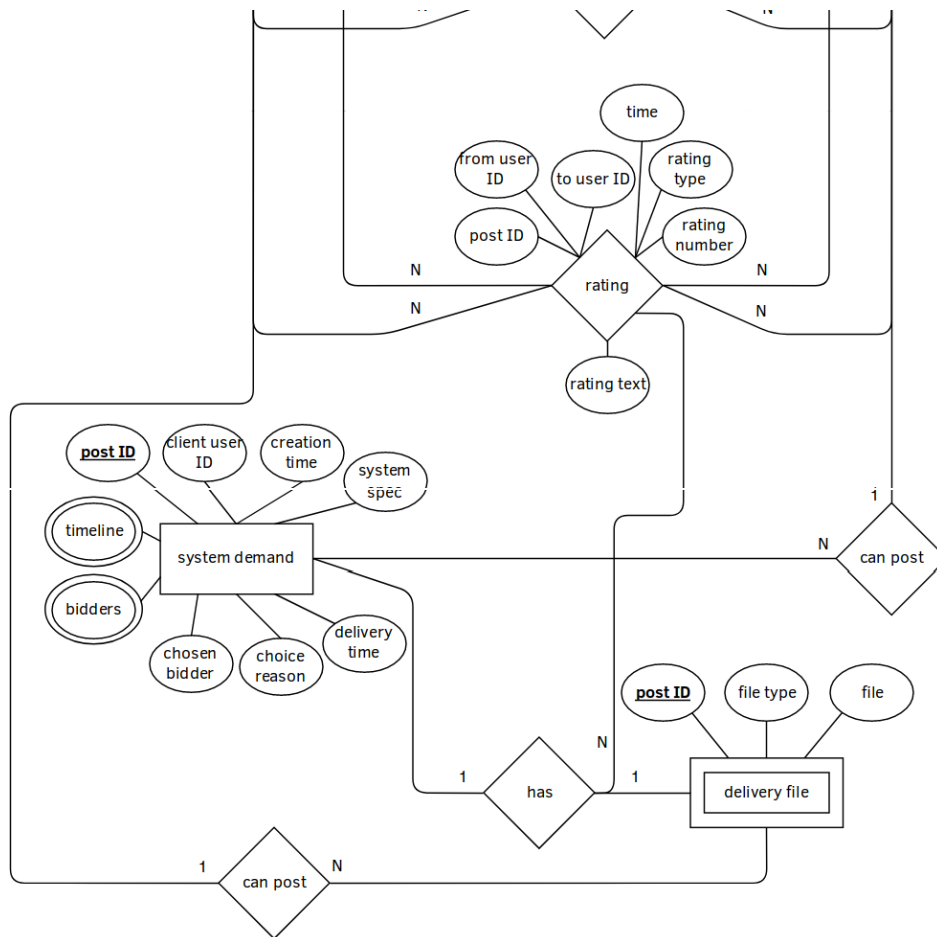

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

3. E-R Diagram

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17

4. Detailed Design

4.1 User Methods:

```

login_to_the_system(username, password)
    bool value = verify_login_credential(username, password)
    if value == true
        sucessfully login
        redirect user to the main GUI interface
    else
        unsuccessful login
        redirect user to the login GUI interface
    end if
    return

logout_from_the_system(username)
    removeCache(username)
    redirect user to the logout sucess page
    return

```

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

```

quit_system(userID, quitForm)
    if userID.remainingBalance == true or userID.assignedWork == true
        prompt (exception - cannot quit from system)
    if quitForm != empty
        send_request_to_superuser(userID, quitForm)
    end if
    return

search_public_information(userStatus, userID, depositAmount)
    if userStatus == temporaryAccount
        userdetails = findUser(userID)
        userdetails.append(depositAmount)
        send_application_to_superUser(userdetails)
    else
        displayexception(msg)
    end if
    return

```

4.2 Client Methods:

```

update_profile_for_client(userStatus, userID, business credential)
    if userStatus == accepted
        userdetails = findUser(userID)
        userdetails.append(resume)
        userdetails.append(sample_work)
        save_to_system(userdetails)
    else
        displayexception(msg)
    end if
    return

post_a_system_demand(userID, spec_paragraph, bidding_timeline)
    if spec_paragraph && bidding_timeline
        add_demand_to_system(userID, spec_paragraph, bidding_timeline)
    else
        displayexception(msg)
    end if
    return

view_bids_to_the_system(userID, systemID)
    bids = generate_All_Bids(systemID)
    if bids != empty
        show bids
    else if bids == empty && haspassed(systemID.deadline)
        prompt message to client that system has been removed
        add $10 fine
    else
        prompt message (no bids yet)
    end if
    return

hire_a_bidding_developer(userID, systemID, developerID, bid_amount)
    developer = getUser(developerID)

```

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

```

    if is-non-lowest(bid_amount)
        promptUser(text_justification)
        process_hiring(userID, systemID, developerID, bid_amount, text_justification)
    else
        process_hiring(userID, systemID, developerID, bid_amount)
    end if
    return
end if

add_money_to_the_total_deposit(userID, deposit_amount)
userID.totalDeposit += deposit_amount
return

```

4.3 Developer Methods:

```

update_profile_for_devs(userStatus, userID, resume, interests, sample_work)
    if userStatus == accepted
        userdetails = findUser(userID)
        userdetails.append(resume)
        userdetails.append(sample_work)
        save_to_system(userdetails)
    else
        displayexception(msg)
    end if
    return

bid_on_system_demand(userStatus, userID, resume, interests, sample_work)
    if userStatus == accepted
        userdetails = findUser(userID)
        userdetails.append(resume)
        userdetails.append(sample_work)
        save_to_system(userdetails)
    else
        displayexception(msg)
    end if
    return

```

4.4 Visitor Methods:

```

apply_to_be_a_client_or_developer(userStatus, userID, depositAmount)
    if userStatus == temporaryAccount
        userdetails = findUser(userID)
        userdetails.append(depositAmount)
        send_application_to_superUser(userdetails)
    else
        displayexception(msg)
    end if
    return

view_application_status(userID)
    if userID.status != pending
        show (userID.status)
    else

```

Turk System	Version: 0.1
Software Requirements Specification	Date: 17/Nov/17
CSC322-EF2-0002	

```

        prompt (no status yet)
    end if
    return

```
